

The WTF Report

"Where're The Financials?"

Version 1.9.0

August 2026

Setup & Reports Guide

The WTF Report (yes, it stands for *"Where're The Financials?"*) is a small Chrome extension that adds **seven ready-to-run reports** to your ShopView account — including several that ShopView doesn't offer as an export today. It lives in your browser, works on top of the ShopView login you already have, and every report exports to **CSV** (opens straight in Excel) and **Print → Save as PDF**.

✓ Safe by design

The extension is **read-only**: it never creates, edits, or deletes anything in ShopView, and it never sends or emails anything. It simply reads your data to build reports, using the ShopView session already active in your browser — no passwords, tokens, or API keys are stored anywhere.

What's inside — at a glance

WIP

Work In Progress — the dollar value of open, not-yet-invoiced work, with margins and shop-floor detail.

WO Review

Work Order Review — a printable per-work-order breakdown: parts with margins, labor by tech & date, time-clock punches, totals.

Tech Labor

Tech Labor — labor dollars billed and billed hours per technician for any period.

Sales

Sales export — ShopView's Performance → Sales report, finally exportable.

A/P

Accounts Payable — Aging Summary, Unpaid Invoices, and Aging Detail as CSV or print.

Velocity

Part Velocity — how fast every inventory part moves, with on-hand and last-sale data.

Invoices

Bulk invoice download — every invoice for a customer as individual PDFs in one ZIP.

What you'll need

- **Google Chrome** (Microsoft Edge and Brave work the same way — Edge users open `edge://extensions` instead).
- Your normal **ShopView login** at `app.shopview.com`.
- About **two minutes**. There is no installer to run — you download a folder and point Chrome at it.

1 Download the extension

DOWNLOAD LINK

https://drive.google.com/drive/folders/1shPJMmYjen_p94UGiit8oC1rlky3EJJ7

- 1 Open the link above. It's a Google Drive folder named `wtf-report-extension`.
- 2 Click the folder name `wtf-report-extension` at the top of the page and choose **Download**. Google packs the folder into a single ZIP file and downloads it.
- 3 **Unzip it.** On Windows: right-click the ZIP → *Extract All...* On Mac: double-click the ZIP. You'll end up with a folder called `wtf-report-extension`.
- 4 **Move that folder somewhere permanent** — for example `Documents`. Chrome runs the extension straight from this folder, so don't delete it or leave it in `Downloads` where it might get cleaned up later.

2 Install it in Chrome (one time)

- 1 In Chrome, type `chrome://extensions` in the address bar and press Enter.
- 2 Turn on **Developer mode** — it's a toggle in the **top-right corner** of the page.
- 3 Click the **Load unpacked** button that appears in the top-left.
- 4 Select the unzipped `wtf-report-extension` folder and confirm.
- 5 A card named **"The WTF Report"** appears in your extension list — you're done. Optionally, click the puzzle-piece icon next to Chrome's address bar and **pin** The WTF Report so its icon is always visible.

Why "Developer mode"?

This extension is shared privately with ShopView customers instead of through the public Chrome Web Store, so Chrome uses its "unpacked" install method. If Chrome later shows a reminder about developer-mode extensions, that's expected — the extension keeps working normally.

3 Run your first report

- 1 Log into ShopView at `app.shopview.com` as usual.
- 2 Look for the blue **Reports** tab docked on the **right edge** of the page (about two-thirds of the way down), or click the extension's toolbar icon. The panel slides out and docks on the right — you can drag its edge to resize it, and there's a dark-mode toggle in the header.
- 3 Check the **account shown at the bottom of the panel** — that's whose data the reports will pull. If it's not the right one, switch accounts in ShopView first.
- 4 Pick a report tab, set your options, and click **Run report**. The finished report opens in a **new browser tab** with sortable tables, summary tiles, **CSV** export, and **Print → Save as PDF**.

Keeping it up to date

The extension checks for new versions on its own and shows a **desktop notification** when an update is ready. When that happens:

- 1 Download the latest `wtf-report-extension` folder from the **same Drive link** on page 2 and replace the contents of your saved folder. (If your folder syncs via Google Drive for desktop, the files update by themselves — skip this step.)
- 2 Open `chrome://extensions` and click the **reload**  icon on “The WTF Report” card. That's it.

The reports, one by one

Every report is read-only, opens in its own tab, and offers CSV export and Print → Save as PDF. Long-running reports show live progress and a **Stop** button — stopping still gives you a clearly-labeled partial report.

WIP Work In Progress — open work, in dollars

The value of everything that's **open but not yet invoiced** — the same scope and financial columns as ShopView's official WIP report, plus operational detail the official report doesn't show.

- **Options:** choose which statuses to include (quick buttons: *Select all* / *All unbilled* / *In shop only* / *Clear* — “All unbilled” matches the official report), plus an optional *Created On* date range for faster runs.
- **Financial columns per work order:** Approved Total, Labor & Parts Sell, Labor & Parts Cost, Shop Supplies, Discounts, Tax, Total, Margin, and Margin %.
- **Operational columns:** line counts, parts to order / in stock, vehicle on site, techs clocked in, estimated hours, progress %, VIN, plate, service advisor, tech, mileage, engine hours.
- **Summary up top:** work-order count, Total WIP \$, Total Margin \$, Overall Margin %, vehicles on site, techs clocked in, parts to order / ready to pick — plus a by-status breakdown and a top-10 chart.

Large sets take a few minutes — the report reads each work order individually. Progress is shown; Stop gives a labeled partial report.

WO Review Work Order Review — the printable “internal invoice”

One printable document per work order with everything an owner checks before invoicing: a snapshot with customer & asset info, summary tiles, **labor by tech & date** (per-day hours and value, per-tech subtotals), per-line cards (labor sessions · parts with unit cost / sell / margin % · pending part requests · tech story), invoice totals with tax, payments and open balance, and a **time-clock audit** of every punch — with OPEN flags for techs still on the clock.

- **Input:** up to 10 work-order numbers, comma-separated — `S1-2343` or just `2343` both work (a location dropdown resolves bare numbers). Combined into one document with a page break per work order. Works on invoiced and paid work orders too.
- **Use current:** one click fills in whatever you're looking at — on a work order it takes that WO; on a customer profile it pulls *all* of that customer's work orders; on the Work Orders list it takes whatever the active tab is showing (25 per report, with a pager when there are more).
- **Export:** Print → Save as PDF (print-optimized, US Letter), or a CSV ZIP with six flat files per work order (labor by tech & date, labor sessions, punches, parts, lines, summary).

Internal use: this report shows your costs and margins — it's for your team, not something to hand to your customer.

Tech Labor Tech Labor — billed dollars & hours per technician

The per-technician numbers shops ask for at payroll or bonus time: **labor dollars billed** and **billed hours** for a date range, with actual logged and clocked hours right next to them.

- **Period:** This week / Last week / This month / Last month (weeks start Monday), or custom From/To.
- **Scope:** work orders invoiced in the period; an optional checkbox also includes unbilled work orders created in the period, shown as separate *Invoiced \$ / Unbilled \$ / Total \$* columns.
- **Fair attribution:** each line's invoiced labor value is split across the techs assigned to it (weighted by logged time, then time estimates), so flat-rate and discounted lines still count and the report total reconciles with what you actually invoiced. Lines with no tech assigned appear on an (*Unattributed*) row instead of silently disappearing.
- **Columns:** Tech, WOs, Billed Hrs, Labor \$ Billed, Avg \$/Hr, Logged Hrs, Clocked Hrs — plus cross-check tiles against ShopView's own Sales totals for the same period.

A full month of invoiced work orders takes a few minutes; progress and Stop are shown.

Sales Sales — the Performance → Sales report, exportable

ShopView's Performance → Sales report has no export button — this gives it one.

- **Period:** one-click presets (This month / Last month / Last year / Yesterday) or a custom From/To range.
- **One row per invoice:** labor, parts, and total *Sell, Cost, Profit, Margin %*, plus hours worked and invoiced.
- **Summary tiles:** Total Invoiced, Total Profit, Total Margin %, Labor / Parts Invoiced, Hours.

A/P Accounts Payable — three reports with no export button, exported

Downloads ShopView's own A/P reports as CSV or print. Pick a report and an **as-of date** (defaults to today).

- **Aging Summary** — one row per vendor with aging buckets (Current / 1–30 / 31–60 / 61–90 / 91+) and totals per bucket plus Total Payable.
- **Unpaid Invoices** — one row per open vendor invoice: Vendor, Invoice #, Type, Date, Due Date, Past-Due days, Amount, Open Balance, Location.
- **Aging Detail** — every open invoice grouped by aging bucket.

Velocity **Part Velocity — how fast your inventory moves**

For every inventory part: **Qty Sold** (net), **# Work Orders**, **Last Sale**, **Last Received**, **Avg Monthly**, **On-Hand**, **Days Since Sale**, **Vendor**, and a **Movement** rating. Pick a date range, with optional vendor and movement filters. Sortable table, top-10 chart, CSV, print.

The report checks each part's history individually, so large catalogs take a few minutes — the vendor filter is the easiest way to narrow a run.

Invoices **Invoices — bulk-download a customer's invoice PDFs**

ShopView can only email a customer one combined statement — there's no way to download their invoices in bulk. This grabs **each invoice as its own PDF** and bundles them into **one ZIP**. It never sends or emails anything.

- Type the customer's account name → **Find** → pick the exact match from the dropdown.
- Choose **All invoices** (paid + unpaid) or **Unpaid only**, plus an optional invoice date range.
- Click **Download ZIP** — each PDF inside is named by its invoice number (e.g. `S-2275.pdf`). If any single invoice fails to fetch it's skipped and counted in the log, and you still get the rest.

FAQ & troubleshooting

Is it safe? What can it touch?

It's read-only — it never creates, changes, or deletes anything in ShopView, and never sends or emails anything. It runs only on `app.shopview.com`, uses the login already active in your browser, and stores no passwords or keys. You can remove it any time from `chrome://extensions`.

A report failed, or the log shows 401 / 403.

Your ShopView session expired. Refresh `app.shopview.com`, log in again, and re-run the report.

I don't see the blue Reports tab.

Make sure you're on `app.shopview.com`, then refresh the page. Still missing? Open `chrome://extensions`, check "The WTF Report" is switched on, click its reload  icon, and refresh ShopView. Clicking the extension's toolbar icon also opens the panel directly.

The report is taking a while.

WIP, Velocity, WO Review and Tech Labor read each work order or part individually, so a few minutes for a big date range or catalog is normal. The panel shows live progress, and **Stop** always gives you a labeled partial report. Narrower dates or a vendor filter make runs much faster.

A money cell shows "—" instead of a number.

That work order's detail lookup didn't answer during the run — the report's log shows how many were affected. Re-running usually fills them in.

Chrome mentioned "developer mode extensions" when it started.

Expected — that's Chrome's standard note for any extension installed outside the Chrome Web Store. The extension keeps working normally.

Questions?

Just reply to the email this guide came with, or reach the ShopView team at support@shopview.com — we're happy to walk you through the setup or add the numbers you need to a report.
